It's now possible to download JPEG image quality post-processing adjustments into Lightroom. It's a smoother process than downloading them directly from Photoshop. I wonder if Adobe will add similar functionality to Lightroom 4 in the future. Many people do prefer shooting JPEG files, and a paid Lightroom upgrade could generate new revenue for Adobe. Fingers crossed! Lightroom now has a filter for non-destructive adjustment of a single channel of the image. A simple way to correct imperfections, without any chance of inducing picture noise. This is great, but it takes some get used to, even though it's not all that difficult to use. There's a new way to manage fonts in Lightroom. You can add metadata information to a particular font, which is then associated with the various elements in the image. This is a nice feature. Lightroom now allows you to switch between the RAW and JPEG file formats when you import an image. Admittedly, this is not a huge deal, but it's nice if you're going to have JPEG images in an existing catalog. Lightroom has a new way to view thumbnails for images you have imported, which is nice. And it's been added to the new version of Bridge. However, only the thumbnails are newly updated. The larger view has not changed. The 512×512 picture size limit that was introduced in Lightroom 3 has now been removed. Unfortunately, you can't just select a much bigger picture and have it automatically displayed in the larger view. Instead, it has to be done manually. It would be easier to have that functionality included.
