In addition to adding new features to Photoshop, the software is available on new platforms: Apple released MacOS Mojave, which includes significant enhancements to the macOS operating system, including improved multi-tasking and hyper-convergence. New features and changes to the operating system were designed with the assumption that the Mac would be used as a primary workstation. Photoshop itself will be made available on Apple Silicon Mac-based systems running macOS Mojave in the fourth quarter of 2019. The major new feature that enables the cooperation of multiple users is Share for Review, named for its ability to share a photo for review by other users. It provides a single file that includes metadata (title, location, IP

address, etc.) that different users can see on the web browser, and which can be modified. From their web browser, multiple users can provide comments on it, similar to the comments within the main Photoshop file itself.
