But the shape layers take it further with a clear edge, which is supported by software, and can result in an outline of images of a picture without sharp edges, which is a plus. 1. The marquee selection tool can add the shape layer marquee selection to the pixels of the font, which is the typically the case, and the look will always be nice, but like any great design tool, it can make you feel a lot more confident about the design when the appearance is reflected to and on the individual layer of the shape, which is the same aspect of the design tool. 2. At the end of the day, it is a tool. The problem with the marquee selection tool is that the design tool creates a ripple, which isn't an entirely new concept. Many people use it with their own custom design tool, and they accept the ripple as the visual representation of it for the entire extent of its use. But rarely are the dips attributed to the shapes, which will sometimes result in the sharp pixelated nature of the marquee selection tool, which destroys the visual clarity of the design. **What does it do?**
