The Shape Layer can be resized and moved just like the layers in Photoshop. With the Layer Mask, you can mask out elements of the layer, including point and mask. The Shape Layer gives the ability to apply transformations to each component of the shape to create a new, individual shape instance, without affecting the original. The new shape layers are a new functionality in Photoshop. It allows you to position, resize, and rotate shapes. The shapes can be rearranged, moved, and resized with no loss in quality. The Shape Layer is an individual shape in a layer. The Shape Layer is a composite shape in a layer. You can add a new layer to your selection or edit existing layers without affecting the original image. A great example of this is the ability to have Photoshop edit those unruly rough edges that make up the edges of a billboard. While you're capturing the still, the software can easily retouch or remove imperfections, such as chalk dust, leaves or other debris on its own.
