When initiating a new image, there are new tools for creating a mood, or style. In Elements, the Other panel gives you some basic tools for modifying an image. When initiating a new image, Lightroom gives you tools for selecting subjects from a drop-down list to help create a custom photo. Lightroom also features a new grid called "Motionlands" with options for creating a scene previously impossible in previous versions of Elements or Lightroom. Photoshop is a very mature software package, but there are still many features that are not available in the iPad version. In particular edge-based tools, such as the Content Aware Move tool, are unavailable, which is too bad. Adobe has implemented much of the missing features for its Creative Cloud apps.] Elements creates photo books like you've never seen them before. And so do its more adventure nature cousins: Photoshop and Lightroom. The cloud-based creators also work great on the iPad—for example, I now have a full-fledged iPad version of the Lightroom blog and it's not too much out of the way of the HD photo book review workflow. Indeed, I've now moved those reviews to full blogs too. At a few hundred bucks each, Elements and Photoshop are still highly recommended, even on new Macs, and they continue to evolve artistically and technically. If you do use the iPad version of Elements to its maximum, you'll enjoy the powerful workflow that made Lightroom such a success. Also try Android, Windows Phone, and older Mac platforms if you use a Macintosh. You'll thank me one day.
